- The information for each quarter aims to cover all sales of residential properties, where applications are received for registration with Registers of Scotland in the period, where the selling price of the property lies between £20,000 and £1,000,000.
- The data includes both cash sales and properties bought with a mortgage, and right to buy sales. The analysis aims to exclude single sales of blocks of properties.
- Properties are allocated to Local Authority areas through use of a grid reference applied to an automated Geographic Information System. Unallocated properties result from incomplete or inaccurate grid references and these unallocated sales are identified separately.
- More detailed reports showing figures for more specific geographic areas are available for a charge from Registers of Scotland.
- The majority of the four house types used are identified using a combination of Ordnance Survey mapping products and Census data. A proportion of house sales cannot be allocated a type using these methods and are allocated to one of the four house types using a different methodology. Please see the guidance notes at the following link for further information about this methodology: <http://www.ros.gov.uk/aboutus/pressreleases.html>.
- Derived Market Value is the total number of sales under each house type shown in the table above. This differs slightly from the actual Market Value due to the methodology of allocating properties to a house type. Further information about this methodology is available in the guidance notes at the following link: <http://www.ros.gov.uk/aboutus/pressreleases.html>.
- Slight changes to the statistics for the previous quarter and previous year shown above are common when these statistics are compared with how they originally appeared in the relevant Registers of Scotland News Release for the previous quarter or the previous year. This is due to the quality assurance process that is applied to the data by Registers of Scotland. The quality and content of the data is improved on an ongoing basis. The key reasons for these changes are as follows: unallocated sales are properly identified and added to the relevant Local Authority area, property types are changed from residential to commercial or vice versa, a house type is allocated to the property once it has completed the plans element of the registration process, a very small number of prices paid have been incorrectly noted and are subsequently updated to reflect the true sale value. These changes do not affect the meaning of the overall statistics. If an error has occurred that results in a significant change to the original press release an additional note will be added to the press release drawing users' attention to the change.

The processes for providing statistics from house price registration data are designed to meet the standards of the Scottish Government statisticians. Registers of Scotland are working, with statisticians within the Scottish Government, towards attaining official statistics status for these statistics.

Please see notes under "Table 4" for further information about the statistics contained in the above table

The processes for providing statistics from house price registration data are designed to meet the standards of the Scottish Government statisticians. Registers of Scotland are working, with statisticians within the Scottish Government, towards attaining official statistics status for these statistics.

Table 10

Volume of Residential Property Prices in Scotland comparing the 3rd Quarter of Financial Year 2008/09 with the 3rd Quarter of Financial Year 2007/08 and with the 2nd Quarter of Financial Year 2008/09 by aggregated Local Authority Areas.
